

We offer an affordable and comprehensive way to learn and master math concepts from fractions through pre-algebra in a step-by-step process at your own pace. The videos explain the concepts, the books provide practice to mastery.

The 35 **videos** and books are presented in sequence.

The skills in each book are built on skills learned in previous books. If you are new to fractions, you might want to start at the beginning with Book 1, **"What is a Fraction?"**

The **videos** are whiteboard representations of the book introductions for each concept. You can pause, replay or fast-forward as you wish to help your comprehension.

If you have had fractions  or even pre-algebra, but did not quite master some of the concepts, browse through the book titles and videos (they are free), then select a book to download (only \$8), and truly master that concept before it causes more problems down the road.

Each book provides about a week's worth of practice problems with 2-3 pages per day. Smaller, daily increments of practice will provide the best way to retain the material and truly master the concept. Of course you can repeat the book if you feel you need a bit more practice. We recommend timing your work, so you can chart your improvement! The answer sheets are included at the end. **Don't Peek!**

**Pinecone Academy is based on pencil and paper practice.** Research, combined with our own 30 years of experience, shows that learning and retention are improved greatly with writing steps and answers rather than typing answers, or especially selecting multiple choice answers.

We welcome your feedback. And, since this our first offering, we also welcome diligent students who may find an error. We have thoroughly checked and re-checked, but if you do find an error, we will give you a free book!

Watch for new videos and books from Pinecone Academy. Coming soon is Algebra I.

Thank you for choosing  
Pinecone Academy.
